SMART HOME

CIRCADIAN LIGHTING

Insona is a company engaged in embedded industrial computers and their

A national high-tech enterprise engaged in automation control design, research and development, production, and sales.

Its business includes: industrial iot big data saas platform, enterprise cloud, industrial solutions

Smart homes, smart lighting, smart communities, energy management, and many other fields of the internet of things

The company has been engaged in the development of underlying bluetooth protocols for over ten years,

breakthrough in the application of bluetooth autonomous network technology in the field of smart homes,

the industry is currently at a leading technological level.

The company covers communication protocol layer, module development layer, product application layer, and system platform

The construction layer has completely formed an independent technological pathway and formed a high level of industry technology barriers.

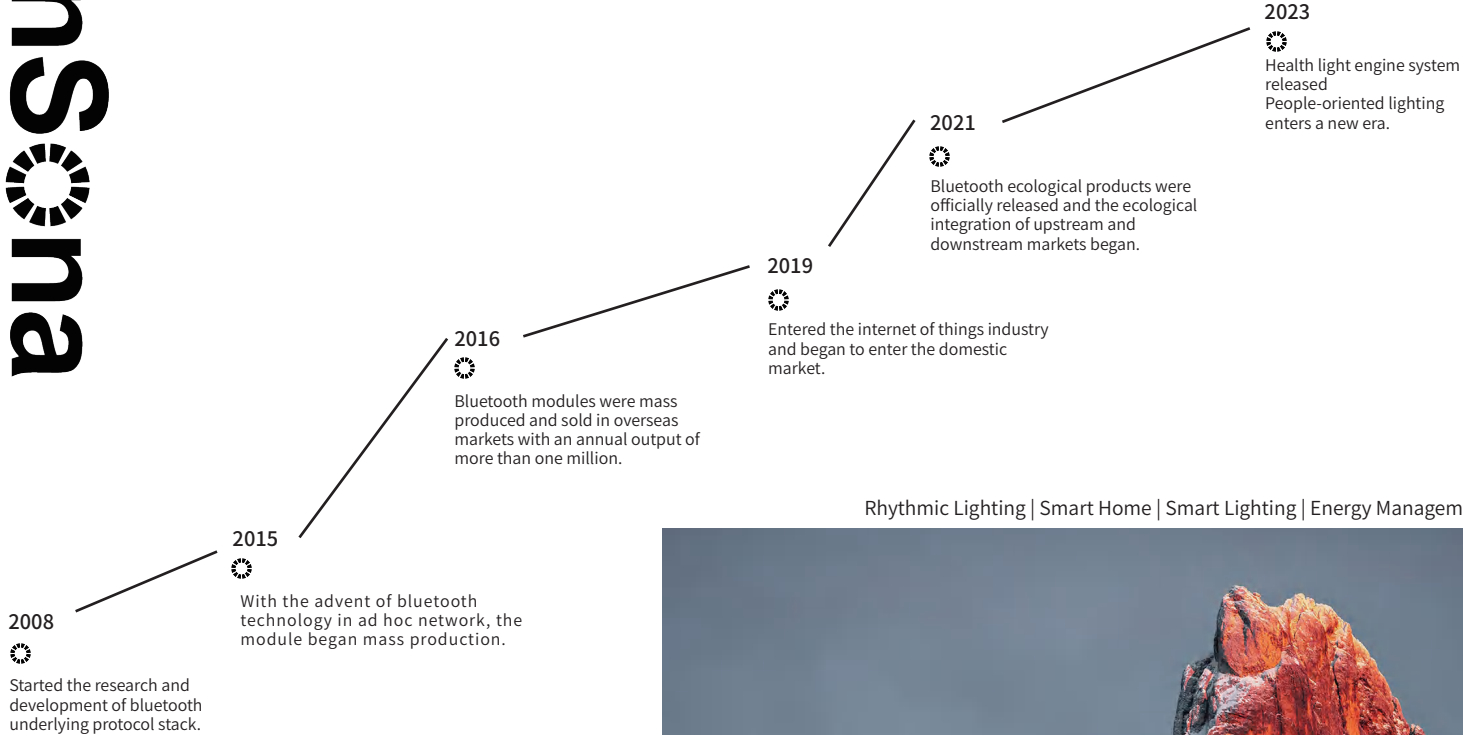

The company has integrated research and design personnel of the most advanced intelligent control systems today,

we have advanced practical experience in the application and development of high-end intelligent control products.

Since its establishment, the company has always adhered to the lighting design concept of rhythm, human factors, and health, hoping to

I hope to bring natural light to thousands of households.

TIME

MELATONIN

LIGHT

Test Result

Circadian lighting can reduce melatonin levels by 18% and increase concentrations by 3% compared to traditional lighting under the same light conditions, and can increase melatonin levels by 5% at night, causing people to fall into deep sleep for 52 minutes in ADVANChe above is excerpted from Korea National University.

The above is excerpted from Korea National University

TIME

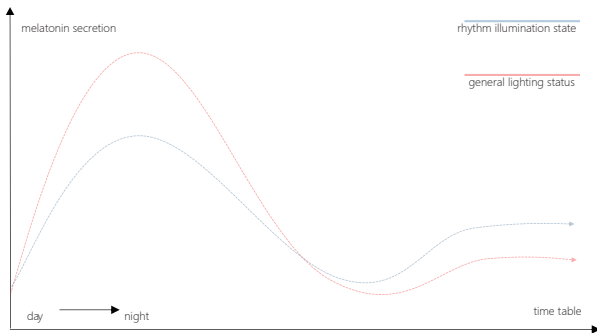

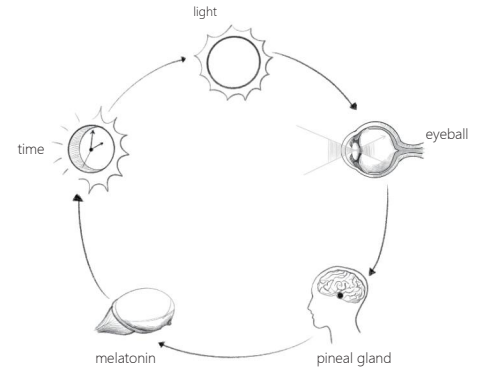

MELATONIN

LIGHT

Circadian

In 2002, the third type of photoreceptor cell in the retina, retinal ganglion photoreceptor cells, was discovered, and the photobiological effect was completely explained and developed. With the study of the non-visual biological effects of light it has been discovered that the effects of light on human beings are not just as simple as making people see the world clearly. At the same time, it also affects the circadian rhythm of humans. Lighting MELATONIN is closely related to health.

LED is easy to digitally control, and it can be finely adjusted according to the body's needs for healthy lighting to control the main factors of non-visual biological effects of light, such as spectrum and chromaticity. Based on this feature of LED, we design the intelligent health lighting system around LED lighting technology.

medical clinical trial data of rhythm lighting

test site	national university of korea
research object	30 men between the ages of 30 and 50
test cycle	3 days and 2 nights for everyone
test form	saliva, heart rate, eeg, questionnaire, d2 test

Light Care

Light,
in the application of intelligence,
has been given a more important significance.
It is not only a function,
but also a brush for art in the space.
It can achieve visual guidance,
emotional expression,
and atmosphere shaping.

Light is meticulous.
The wake-up light in the morning guides your mental state,
and the night-time sleep aid glimmer accompanies you to fall asleep.
The use of light that we emphasize is no longer a simple function,
but the care for people on the basis of being close to nature.

inSona

CIRCADIAN

HUMAN CENTRIC

Human Centric

Human centric

We feel the light differently because of the differences in experience, personality, culture and many other factors.

We reject modelization,only design for your private environment and interests.

Melatonin

The chemical name of melatonin (mel) is 5-methoxy-n-acetyltryptamine.

Its biosynthesis is mainly carried out in pineal gland cells. With tryptophan as raw material, it is transformed by 5-hydroxytryptamine under the action of enzyme.

The biosynthesis of mel depends on both light and sympathetic nerve. When the light signal reaches the superior cervical ganglion (scg), the sympathetic postganglionic fibers inhibit the release of norepinephrine (ne); in the dark, sympathetic neurons release more adrenaline, activate adenylate cyclase, promote the synthesis of cyclic adenosine monophosphate, activate nat enzyme and promote the synthesis of mel.

The pineal gland secretes mel in the following ways: one is secreted into cerebrospinal fluid; the other is secreted directly into the blood circulation.

Mel secretion is related to age. With age, mel gradually decreases and decreases by 10% ~ 15% every 10 years.

The study found that mel's 24-hour rhythm remained in the dark season; similarly, in the summer with continuous light, the human body also maintains a certain circadian rhythm, indicating that the circadian rhythm cycle mechanism secreted by mel is endogenous and formed in the long process of human evolution.

2017 nobel prize in physiology or medicine -- three genes that determine the biological clock

Mel has shown a variety of biological functions and broad application prospects.

Delaying senile dementia

Inhibiting tumors

Inhibiting epilepsy

Relieve circadian rhythm disorders

Relieve depression

Sensor Introduce

His device is designed to solve the problem that the infrared sensor in the traditional smart home has small displacement in a short time or
The detection of small action range is designed without preparation or false alarm, and the breathing detection module is built in the equipment
Block is combined with bluetooth 2.4g module to detect the presence signal of human body and apply it to smart light
In the system, the user can control the sensor through app and measure the sensing distance of the sensor
Departure time, delay time and ambient illumination are set and linked.

Open Protocol Framework

The bluetooth curtain opening and closing control motor has a delicate and compact appearance and can be installed in a very narrow space. Built in insona bluetooth chip, no gateway, local operation. It is applicable to various occasions of opening and closing curtain motors. It has many functions, such as electronic travel limit, built-in receiving function + stop in case of resistance, light touch start function, manual pull in case of power failure, safe voltage, mute and so on. Through the bluetooth network, it can start, close, stop, percentile stroke control and other functions of the motor. It supports many functions such as handheld remote control, face paste remote control, bluetooth remote control and app control. With the supporting products of insona, it can be perfectly matched with lights, scene panels and sensors.

Data Gateway

inSona Blubee ·

IP20

Model	Network Type	Working Voltage	Wireless Connection	Communication Distance
IN-BLE-HUB-01A	WIFI	5V(2A)	BLE2.4GHz	8~16m
